Bangalore, Karnataka, 560058, IN

Software Engineer with 3.4 years of experience building scalable fintech and digital lending platforms using MERN stack, microservices, and event-driven architecture. Experienced in backend optimization, distributed systems, production debugging, and AI-powered applications using LangChain and RAG pipelines.

Work Experience

Associate Software Engineer

Jan 2024 - Apr 2026

Epikindifi Software (ezee.ai) | Bangalore, India

- Architected Product Manager 2.0: Engineered a core full-stack MERN platform managing dynamic product configurations across 10+ major NBFC clients (including Jio Financial Services, IDBI Bank, Vistaar Finance, Clix Capital) using modular microservices and MongoDB.
- High-Throughput Architecture: Designed and deployed a distributed inventory and leasing infrastructure for Reliance Jio AirFiber, processing 100K+ concurrent records with a 30% jump in operational efficiency
- No-Code Masters System: Programmed a custom Dataset web application enabling non-technical operators to modify master data safely without code deployments, reducing engineering dependencies by 50%
- Zero-Downtime Migrations: Wrote resilient Node.js scripts to upgrade 8 core ecosystem microservices from v4.x to v5.x, successfully onboarding 15+ enterprise clients with zero data loss or service degradation.

Software Engineer Intern

Nov 2022 - Jan 2024

Epikindifi Software (ezee.ai) | Bangalore, India

- Frontend Performance: Streamlined application bundles via React.js code splitting and lazy loading routines, reducing client-side bundle sizes by 30%.
- Dashboard Engineering: Built comprehensive responsive loan officer dashboards incorporating complex pipeline management screens and automated secure document uploads.

Projects

Digital Lending & Collections Architecture

- Established full-lifecycle origination, underwriting, and digitized compliance pipelines serving enterprise banking ecosystems.

Enterprise Knowledge Retrieval Agent (RAG)

- Engineered a full-stack RAG pipeline using Python, FastAPI, and React.js to convert document uploads into LangChain embeddings stored in Pinecone, leveraging tool and function calling for dynamic context retrieval and user-friendly LLM responses.

Core Skills

Languages: TypeScript, JavaScript (ES6+), Python

Backend: Node.js, Express.js, RESTful APIs, FastAPI, GraphQL, RabbitMQ, System Design, Microservices, Event-Driven Architecture

AI & Machine Learning: LLM Integration, LangChain, Retrieval-Augmented Generation (RAG), Vector Databases

Frontend: React.js, Next.js, Redux Toolkit, Context API, Material UI, Responsive Design

Databases: MongoDB, MySQL, Redis

Cloud & DevOps: Azure, Docker, Nginx, CI/CD, Grafana, Prometheus

Security & Domain: Rate Limiting, JWT, Payload Encryption, VAPT, NBFC Integration, LOS, CIBIL

Education

GKM College of Engineering and Technology

Jul 2018 - May 2022

B.E Computer Science & Engineering

GPA: 7.2/10
