PROFESSIONAL SUMMARY

Software Engineer with 3.4 years of experience building scalable fintech and digital lending platforms using the MERN stack, microservices, and event-driven architecture. Experienced in backend optimization, distributed systems, production debugging, and high-performance application development.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, ES6+, Python

Backend: Node.js, Express.js, RESTful APIs, FastAPI, GraphQL, RabbitMQ, System Design, Microservices, Event-Driven Architecture

Frontend: React.js, Next.js, Redux Toolkit, Context API, Material UI, Responsive Design

Databases: MongoDB, MySQL, Redis

Cloud & DevOps: Azure, Docker, Nginx, CI/CD, Grafana, Prometheus

Security & Domain: Rate Limiting, JWT, Payload Encryption, VAPT, NBFC Integration, LOS, CIBIL

Practices: Agile/Scrum, Code Reviews, Unit & Integration Testing, Team Mentorship

WORK EXPERIENCE

Associate Software Engineer

Epikindifi Software (ezee.ai)

Jan 2024 - Apr 2026

Bangalore, Karnataka

- Developed and maintained Product Manager 2.0, a MERN-based platform managing dynamic product configurations across 10+ NBFC clients including Jio Financial Services, IDBI Bank, and Clix Capital using modular microservices and MongoDB.
- Implemented Redis pub/sub-based distributed cache synchronization mechanisms across multiple services to prevent stale data delivery and reduce database load.
- Engineered a distributed inventory and leasing infrastructure for Reliance Jio AirFiber, processing 100K+ concurrent records with a 30% increase in operational efficiency.
- Built a no-code Dataset web application enabling non-technical operators to safely manage master data without code deployments, reducing engineering dependencies by 50%.
- Deployed containerized MERN applications on Microsoft Azure using Docker, Redis, and Nginx reverse proxy architecture to improve scalability, traffic distribution, and production performance.
- Collaborated in Agile/Scrum ceremonies including daily standups, sprint planning, and retrospectives across cross-functional teams.

Software Engineer Intern

Epikindifi Software (ezee.ai)

Dec 2022 - Jan 2024

Bangalore, Karnataka

- Optimized frontend performance using React.js code splitting and lazy loading techniques, reducing client-side bundle sizes by 30%.
- Developed responsive loan officer dashboards with complex pipeline management workflows and secure document upload functionality.

PROJECTS

Digital Lending & Collections Architecture | Node.js, Express.js, React.js, MongoDB

Developed scalable MERN stack-based Loan Origination System (LOS) applications for digital lending and collections workflows, including customer onboarding, loan processing, KYC verification, approval management, and fintech compliance integrations.

Enterprise Knowledge Retrieval Agent (RAG) | Python, FastAPI, React.js, LangChain, Pinecone

Engineered a full-stack Retrieval-Augmented Generation (RAG) platform using Python, FastAPI, React.js, LangChain, and Pinecone to deliver intelligent document-based AI responses with dynamic context retrieval.

EDUCATION

GKM College of Engineering and Technology

B.E Computer Science and Engineering, CGPA: 7.2/10

Jun 2018 - April 2022

Chennai, Tamil Nadu
